

QUALITY POLICY AND PRODUCT HEALTH SAFETY

We take quality control very seriously. Our facility has a physical chemistry and a microbiology laboratories equipped with state of the art technology. We conduct strict control of our input of raw and other materials, production process, and finished products.

At the very start we set high production standards and chose a responsible approach regarding quality and safety of baby and conventional products.

Every part of our production process places a special focus on satisfying our customers demands and expectations, preserving the health safety and quality of our products, in line with domestic and international regulations, as well as relevant standards.

We regularly perform preventive controls of each individual business segment, in order to, in addition to permanent supervision and maintenance high quality , regularly find new solutions and improve every part of the production program intended for the youngest.

Our goal is to make our products available not only in the domestic and regional markets, but also in any market where there is a demand for high quality and natural products for babies and adults.

Prerequisite for achieving set results is open and efficient communication with our customers and suppliers, as well as communication within the company. On the way to success, constant education and increase in the competence of our employees are necessary.

By complying with ISO 9001, FSSC 22000, GMP, and HACCP principles, our facility produces and delivers safe and high-quality products under the Nutrino brand, as well as other brands for international markets.
